## Portfolio Commentary

### Market

The archetypical slowdown seen at year-end provided stable trading conditions with low activity in both the primary and secondary markets. Despite passage of the US tax bill, continuing strong equity markets and ongoing rally in oil prices, High Yield posted a modest return, driven predominantly by coupon income. As expected, the FOMC raised rates for a third time in 2017, which did not have a large impact. WTI Crude Oil ended the month up \$3.02 (or 5.26%) to \$60.42/bbl, a multi-year high, lifting Energy 0.83% to be the top-returning sector in December. During the month, the US Dollar Index was down 0.99% and the US Treasury curve flattened with the 2-yr Treasury higher by 8 bps to 1.88% and the 10-yr Treasury yield fell 2 bps to 2.41%.

Technicals were mixed in December. HY mutual funds saw net outflows of \$3.4bn while loan funds had outflows of \$1.1bn, as tracked by Lipper and provided by Barclays. Bond new issuance decreased to \$17.6bn, offset by \$24.5bn in redemptions, leaving net supply at -\$6.9bn, per Barclays. The loan market priced \$71.5bn during the month (\$21.5bn net), according to JP Morgan. The percentage of the HY bond market trading at distressed levels (below 70% of par) ended December at 3.2%, the comparable figure for the loan market (below 80% of par) was 3.9%, and the loan par-weighted trailing default rate was 1.84%, per JP Morgan. The par-weighted twelve-month HY bond default rate moved lower to 1.65% at month-end, per BofA Merrill Lynch. Excluding commodities, the default rate was 1.53%.

The ICE BofAML US High Yield Index returned 0.29% in December, and the Credit Suisse Leveraged Loan Index returned 0.39%. The yield-to-worst (YTW) for the high yield index increased 6 bps to 5.77% and spreads increased 1 bp to 358 bps. The BB, B and CCC bond sub-indices posted returns of 0.07%, 0.35% and 0.88%, respectively. By sector, Energy led, while Telecom was the bottom performer, returning -0.47%. Across risk types (defined by duration and yield to worst), the intermediate risk part of the market was strongest while the better quality, more rate sensitive part of the market lagged. High yield underperformed large cap equities, represented by the S&P 500's 1.10% return, as well as investment grade corporate bonds, represented by the ICE BofAML US Corporate Index's 0.85% return, but outperformed small caps, represented by the Russell 2000's -0.41% return.

### Strategy

SKY Harbor Global Funds—US Short Duration High Yield Fund posted a positive return in December, outperforming the overall high yield market (as defined by the ICE BofAML US High Yield Index) on a gross-of-fee basis. By sector, Energy and Basic Industry were among the top performers, together contributing approximately half of the monthly return. All sectors posted positive returns with the exception of Telecom and Banking, which had negative but muted impact on returns. Single B-s were the top-performing ratings group, followed by Triple-Cs and then Double-Bs.

The YTW on the Fund rose 17 bps to 4.65% and represented 81% of the broad market yield at month-end. The duration-to-worst was 1.8 this month, or 48% of the broad market duration. The average coupon of 6.67% was essentially unchanged from last month's figure and was 26 bps above the average coupon in the broad market. Exclusive of cash, Fund holdings (371 issues, representing 260 issuers) comprised 31% bonds with maturities of less than three years and 69% in longer maturities but trading to expected early take-outs inside this three-year period. We continue to believe that companies will proactively refinance debt ahead of stated maturities to capture the favorable interest rate environment that the new issue market still offers. Overall credit quality was nearly unchanged in the Fund this month: at month-end Double-B rated holdings represented 34.8% of the portfolio, Single-Bs were 53.4% and Triple-Cs were 9.3%.

### Outlook

We maintained a consistent view of market risks and opportunities for most of the second half of 2017 and, as a result, our risk positioning has been generally unchanged. While various geopolitical risks remain, markets are benefiting from the strongest corporate earnings growth in the last five years and the default rate has fallen from the peak reached early in 2017. However, while the high yield market has not hit cycle tight spreads, parts of the market have or are approaching cycle tightness. We believe further spread compression is possible, absent a general spike in risk premiums from a risk that is currently underappreciated in the market. Interest rate expectations seem to be rising, although in our view not meaningfully enough to completely derail the most rate and spread sensitive parts of the market that benefit from crossover buyers. We expect high yield issuance to remain tilted towards better quality and refinancing, but generally be demand driven and sensitive to fund flows. Our conviction that fundamentals will continue to improve and high yield defaults have peaked remains high and the strongest driver of portfolio positioning. However, while corporate fundamentals are strong, we believe we are generally not being paid to take "equity-like" risk at current market levels due to the underlying secular and/or cyclical changes that much of the remaining higher-yielding part of the market faces. Based on our view of risks and valuations across the market, we continue to believe Single-B rated credit offers the best opportunity for attractive returns through credit picking.

Entering 2018, we believe the Fund is well positioned to take advantage of any potential volatility associated with changing geopolitical situations or rising concerns related to increasing rates. Natural turnover, created by calls, tender and maturities, should be high considering the large amount of front-end maturities and expected near-term calls held in the portfolio, which will allow us to be continually optimizing the portfolio for the current market environment. Overall, we believe the Fund has attractive income per unit of duration, which positions it well within the asset class.

## Top 10 Holdings by Issuer Weight

Name	Ratings	Sector	Weight (%)
SPRINT NEXTEL CORP	B2	Telecommunications	2.13
DISH DBS CORPORATION	BB3	Media	1.55
ICAHN ENTERPRISES	BB2	Financial Services	1.51

CSC HOLDINGS LLC	B2	Media	1.18
REYNOLDS GROUP	B1	Capital Goods	1.13
FRONTIER COMMUNICATIONS	B2	Telecommunications	1.12

## Investment Objective

To generate a high level of current income while also experiencing lower volatility than the broader high yield market. The Fund principally invests in US below-investment-grade corporate debt securities that are expected to be redeemed through maturity, call or other corporate action within three years. The strategy seeks to capture the current income of the high yield market with substantially less volatility through the consistency of monthly returns and reinvestment.
