## Portfolio Commentary

### Market

Escalating geopolitical tensions with North Korea, terrorist attacks in Spain and deteriorating sentiment surrounding President Trump's pro-growth agenda derailed risk assets, including high yield, leading to a modestly negative return for the month for the high yield market. Additionally, after rallying in July, WTI Crude Oil reversed course and closed the month down \$2.94 (or 5.86%) to \$47.23/bbl. The US Dollar Index was down 0.21%, and the US Treasury curve flattened by 15 bps with the 2-yr Treasury lower by 2bps to 1.33% and the 10-yr Treasury yield lower by 18bp to 2.12%.

High yield technicals were negative in August as HY and Loan funds experienced outflows and net supply increased. HY mutual funds saw net outflows of \$3.7bn and loan funds had outflows of \$380mn, as tracked by Lipper and provided by Barclays. New issuance increased to \$19.5bn, offset by \$19.3bn in redemptions, leaving net supply at \$200mn, according to Barclays. The percentage of the market trading at distressed levels (below 70% of par) ended August at 3.0%, per JP Morgan. The par-weighted twelve-month default rate was lower at the end of the month at 2.0%, per BofA Merrill Lynch. Excluding commodities, the default rate was 1.5%.

The BofA Merrill Lynch US High Yield Index returned -0.03% in August. The YTW increased 16 bps to 5.55% and spreads increased 25 bps to 381 bps. The BB, B and CCC sub-indices posted returns of 0.25%, -0.09% and -0.79%, respectively. Returns were mixed across sectors with Transportation the top performer, returning 1.35%, while Energy was the bottom performer, returning -0.77%. Across risk types (defined by duration and yield to worst), the most defensive and rate sensitive portions of the market outperformed while the most speculative, credit sensitive part of the market lagged as rates rallied and volatility increased. High Yield underperformed large cap equities, represented by the S&P 500's 0.31% return, as well as investment grade corporate bonds, represented by the BofA ML US Corporate Index's 0.85% return, but outperformed small cap equities, represented by the Russell 2000's -1.27% return.

### Strategy

SKY Harbor Global Funds—US High Yield Fund performed in line with the benchmark in August. Due to interest rate differentials on the currency hedges, some non-USD share classes underperformed for the month. By risk type, overall security selection was a positive contributor to relative performance while allocation had a muted impact. Relative performance benefited from security selection within the better quality, more rate sensitive segment of the market and an underweight to the lowest-performing, more speculative part of the market part. By sector, security selection in speculative Energy was a source of underperformance offset by strong selection in Services and Capital Goods.

The largest positive contributor to returns was again Ahern Rentals Inc. (AHERN) 7.375% notes due 2023, which traded up on Q2 results and guidance that were appreciably ahead of Street expectations, reflecting much improved operating metrics amid a favorable industry backdrop. The largest negative contributor was Exco Resources Inc. (XCO) 8.5% notes due 2022, which traded down when an asset sale did not close as anticipated. Last month's largest negative contributor, Approach Resources (AREX) was again among the bottom contributors to returns in August.

### Outlook

Our view of the economy and markets remains stable and we have not materially changed our outlook or our portfolio positioning. While a variety of geopolitical risks remain, markets are benefiting from the strongest corporate earnings growth in the last five years. The overall high yield market has not reached cycle tight spreads, yet parts of the market have or are approaching cycle tightens. We continue to believe further spread compression is possible absent a general spike in risk premiums. The possibility that longer-dated Treasury yields do not increase meaningfully and actually decrease, does, however, make us more willing to hold assets that have rate sensitivity. Our conviction that fundamentals will continue to improve and HY defaults will peak and recede over the course of 2017 remains high and the strongest driver of portfolio positioning nonetheless. However, we continue to believe we are generally not being paid to take "equity-like" risk at current market levels due to the underlying secular and/or cyclical changes that much of the remaining higher-yielding part of the market faces. We still expect high yield issuance to remain tilted towards better quality and refinancing, but generally be demand driven and sensitive to fund flows, which we expect to be more volatile. Based on our view of risks and valuations across the market, we continue to believe Single-B rated credit offers the best opportunity for attractive returns through credit picking.

We believe our Broad High Yield Market portfolios continue to be well positioned for the current market environment. We have and will continue moderating our underweight to the better quality, more spread sensitive segment of the market, though we are approaching a limit based on the relative value of the remaining opportunity set. We continue to look for opportunities to benefit from credit picking among the higher-yielding segments of the market although remain underweight this segment.

### Top 10 Holdings by Issuer Weight
