Portfolio Commentary

Market

The High Yield market sold off sharply during the first half of November, driven largely by ETF selling to reduce risk as equities also faltered. The second half of the month saw improvement as optimism grew around progress in the US tax reform proposal and the resurgence of the equity rally. High yield also benefited from higher oil prices, as WTI Crude Oil rallied, ending November up \$3.02 (or 5.25%) to \$57.40/bbl, helping the Energy sector return 0.31% for the month. On the negative side, Telecom remained under pressure from wireline weakness and negative M&A headlines. All of these factors led to a slightly negative November for HY. During the month, the US Dollar Index was down 1.59%, and the US Treasury curve flattened with the 2-yr Treasury higher by 18 bps to 1.78% and the 10-yr Treasury yield higher by 3 bps to 2.41%.

Technicals were mixed in November. HY mutual funds saw net outflows of \$7.1bn while loan funds had outflows of \$1.8bn, as tracked by Lipper and provided by Barclays. Bond new issuance increased to \$26.4bn, offset by \$15.2bn in redemptions, leaving net supply at \$11.2bn, per Barclays. The loan market was similarly active, pricing \$103bn during the month (\$15bn net), according to JP Morgan. The percentage of the HY bond market trading at distressed levels (below 70% of par) ended November at 3.2%, the comparable figure for the loan market (below 80% of par) was 3.3% and the par-weighted trailing default rate was 1.84%, per JP Morgan. The par-weighted twelve-month bond default rate moved higher to 1.73% at month-end, per BofA Merrill Lynch. Excluding commodities, the default rate was 1.59%.

The ICE BofAML US High Yield Index returned -0.27% in November, and the Credit Suisse Leveraged Loan Index returned 0.12%. The YTW for the HY index increased 27 bps to 5.71% and spreads increased 12 bps to 357 bps. The BB, B and CCC bond sub-indices posted returns of -0.07%, -0.53% and -0.25%, respectively. By sector, Utilities was the top performer, returning 0.59%, while Telecom was the bottom performer, returning -2.23%. Across risk types (defined by duration and yield to worst), the longer duration part of the market led with a modestly positive return but was offset by the highest yielding, most speculative segment which was sharply negative. High yield underperformed large cap equities, represented by the S&P 500's 3.07% return, as well as small caps, represented by the Russell 2000's 2.88% return, and investment grade corporate bonds, represented by the ICE BofAML US Corporate Index's -0.14% return.

Strategy

SKY Harbor Global Funds—US High Yield Fund outperformed the benchmark in November. Due to interest rate differentials on the currency hedges, some non-USD share classes did however underperform for the month. By risk type, both allocation and security selection were sources of outperformance again this month. The primary drivers of outperformance were security selection across nearly all risk segments and an underweight to the bottom-performing, more speculative, equity-like part of the market. By sector, an overweight and selection in Basic Industry as well as an underweight to the bottom-performing Telecom sector were sources of outperformance, partially offset by weaker selection in Telecom.

The largest positive contributor to returns was Ahern Rentals (AHEREN) 7.375% notes due 2023, which traded up on solid Q3 earnings, particularly in the core rental segment, and a positive outlook. Last month's largest contributor, Light Tower Group Holdings, Inc (LHTTWR) was unchanged for the month. The largest negative contributor was Bonanza Creek Energy Inc. (BCEI), which traded down after reporting weaker earnings and reduced 4Q17 guidance. Bottom contributor last month, Rex Energy Corp (REXX) 8% notes due 2020 was a modestly positive contributor this month, trading up slightly on earnings in line with expectations.

Outlook

We have maintained a consistent view of market risks and opportunities for the last several months and, as a result, held our risk positioning constant. While various geopolitical risks remain, markets are benefiting from the strongest corporate earnings growth in the last five years and the default rate has fallen from the peak reached early in 2017. However, while the high yield market has not hit cycle tight spreads, parts of the market have or are approaching cycle tightness. We believe further spread compression is possible absent a general spike in risk premiums from a risk that is currently underappreciated in the market. Interest rate expectations seem to be rising, although in our view not meaningfully enough to derail the most rate and spread sensitive parts of the market. We expect HY issuance to remain tilted towards better quality and refinancing, but generally be demand driven and sensitive to fund flows. Our conviction that fundamentals will continue to improve and HY defaults have peaked remains high and the strongest driver of portfolio positioning. However, while corporate fundamentals are strong, we believe we are generally not being paid to take "equity-like" risk at current market levels due to the underlying secular and/or cyclical changes that much of the remaining higher-yielding part of the market faces. Based on our view of risks and valuations across the market, we continue to believe Single-B rated credit offers the best opportunity for attractive returns through credit picking. We continue to look for opportunities to benefit from credit picking among the higher-yielding segments of the market although remain underweight this segment.

We believe our Broad High Yield Market portfolios continue to be well positioned for the current market environment. We have moderated our underweight to the better-quality, more spread sensitive segment of the market such that we have reached our target positioning. We continue to look for opportunities to benefit from credit picking among the higher-yielding segments of the market although remain underweight this segment.

Investment Objective

To outperform the broad US high yield market over a full market cycle with less volatility through investing across the full maturity spectrum of the US below-investment-grade debt market. The Fund principally invests in a diversified portfolio of high yield debt securities issued by companies domiciled or listed in the US.
